

Station development in Europe
current/expected in 2030

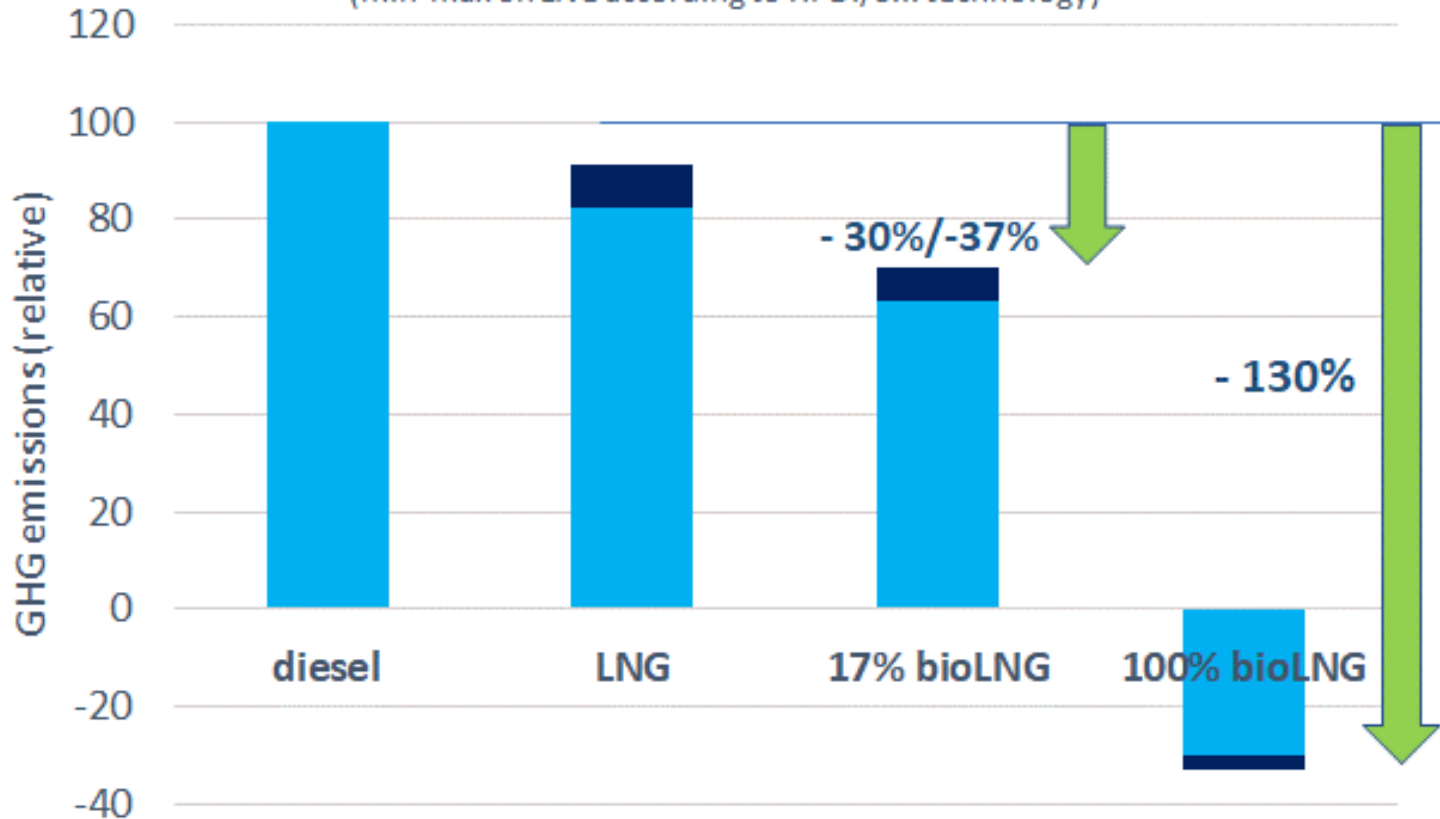

**Today's NG consumption from road transport sector = 2,4 bcm
0,4 bcm as biomethane**

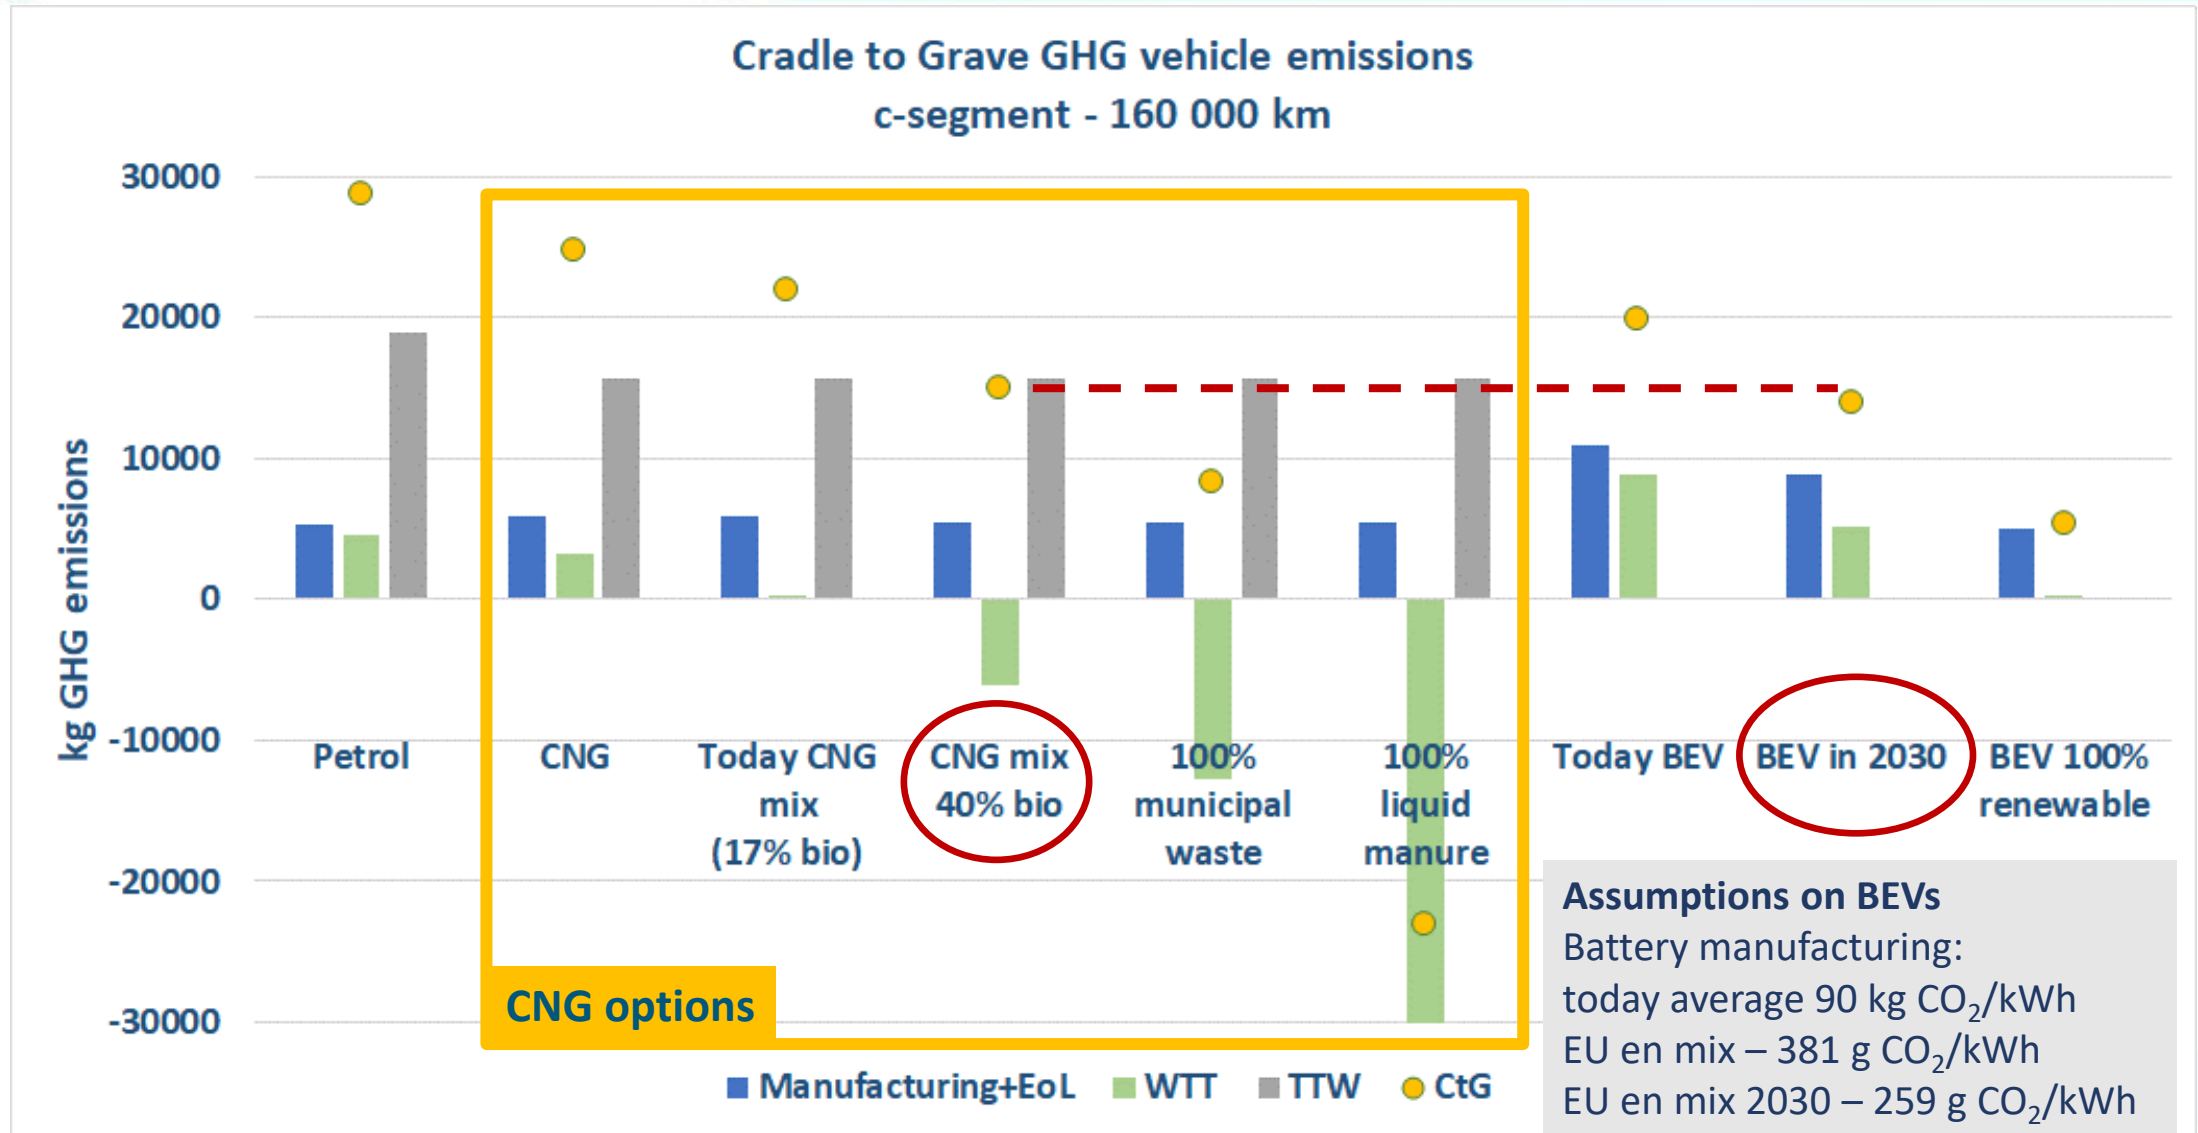

> 25% refuelling stations with BIO option

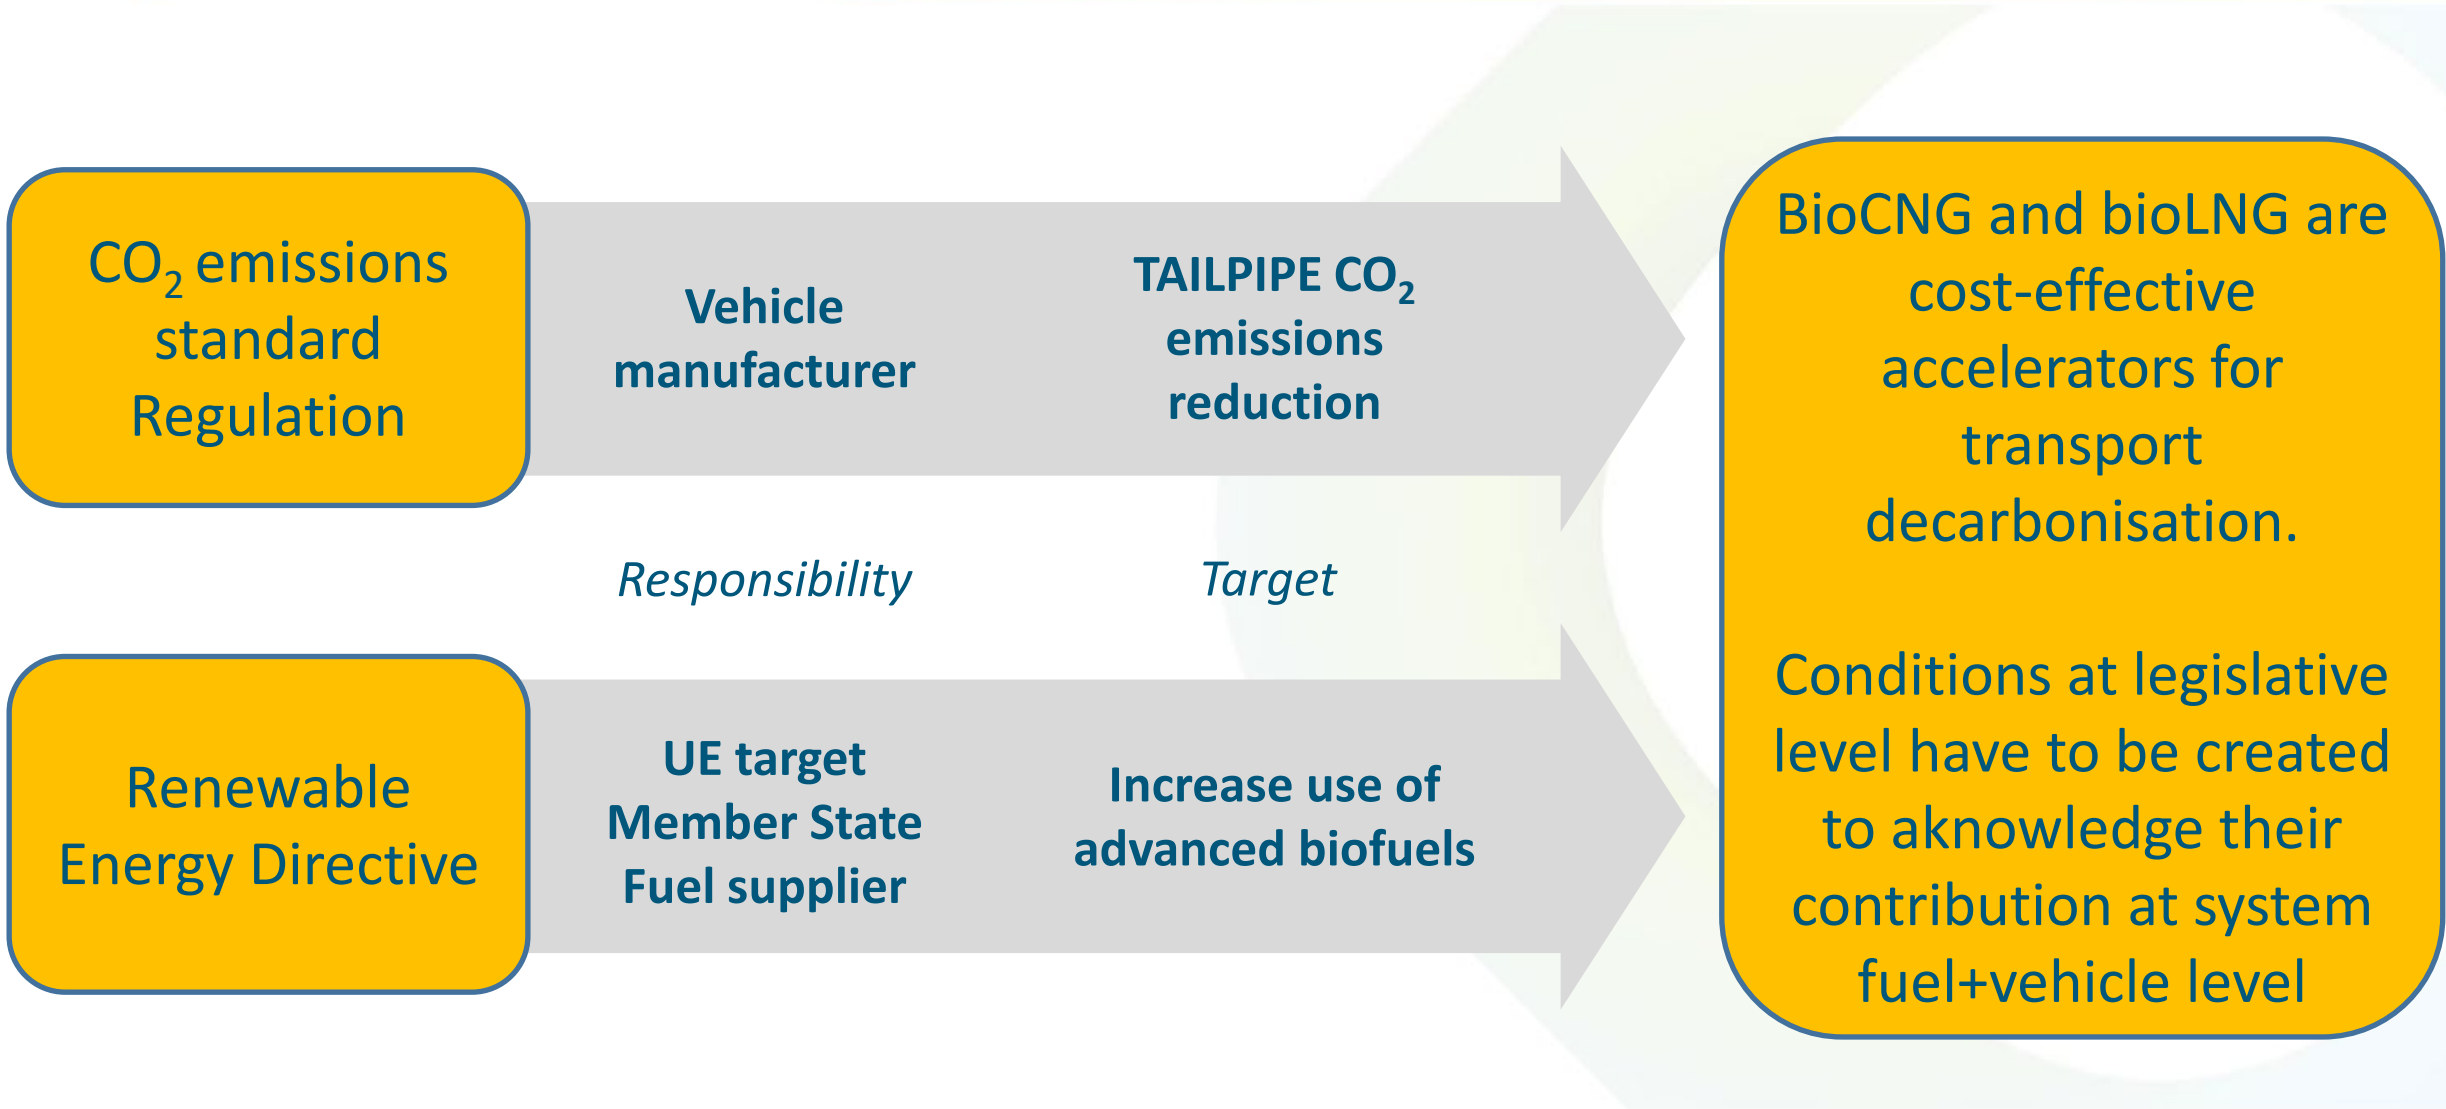

GHG emissions (vehicle + fuel) - 40t LNG truck
(min-max on LNG according to HPDI/S.I. technology)

In the Fast Lane with Biomethane in Transport

15 Mt CO₂
avoided in 2030

Total EU
production capacity
of >1 200 TWh

40% BIO

CO₂ reduction
equivalent to
755 million trees

Up to
1 million jobs
in Europe

More than
4.5 billion € fuel cost
saving per year
