Our story

The European Biogas Association fully believes in the future potential of renewable gas to achieve climate neutrality in Europe. Founded in 2009, the association is committed to the deployment of sustainable biogas and biomethane production and use throughout the continent.

We are a dedicated and energetic team of policy, technical and communication experts, working to affirm the important role of the biogases in the European bioeconomy.

Explore the benefits of EBA membership

Strong advocacy for tangible results

Representing the biogases value chain to EU and national policy makers.

Thorough market intelligence

Providing in-depth assessments of the state of the biogases market in Europe.

Privileged information exchange

High-level events with policymakers, researchers and key industries active in the biogases value chain.

Exclusive access to in-depth policy analysis

Regular updates on policy developments across a wide range of topics, accompanied by the members' platform – EBAnet.

Push for innovation

Boosting the deployment of biogases through solid scientific evidence and cutting-edge research.

Visibility and networking opportunities

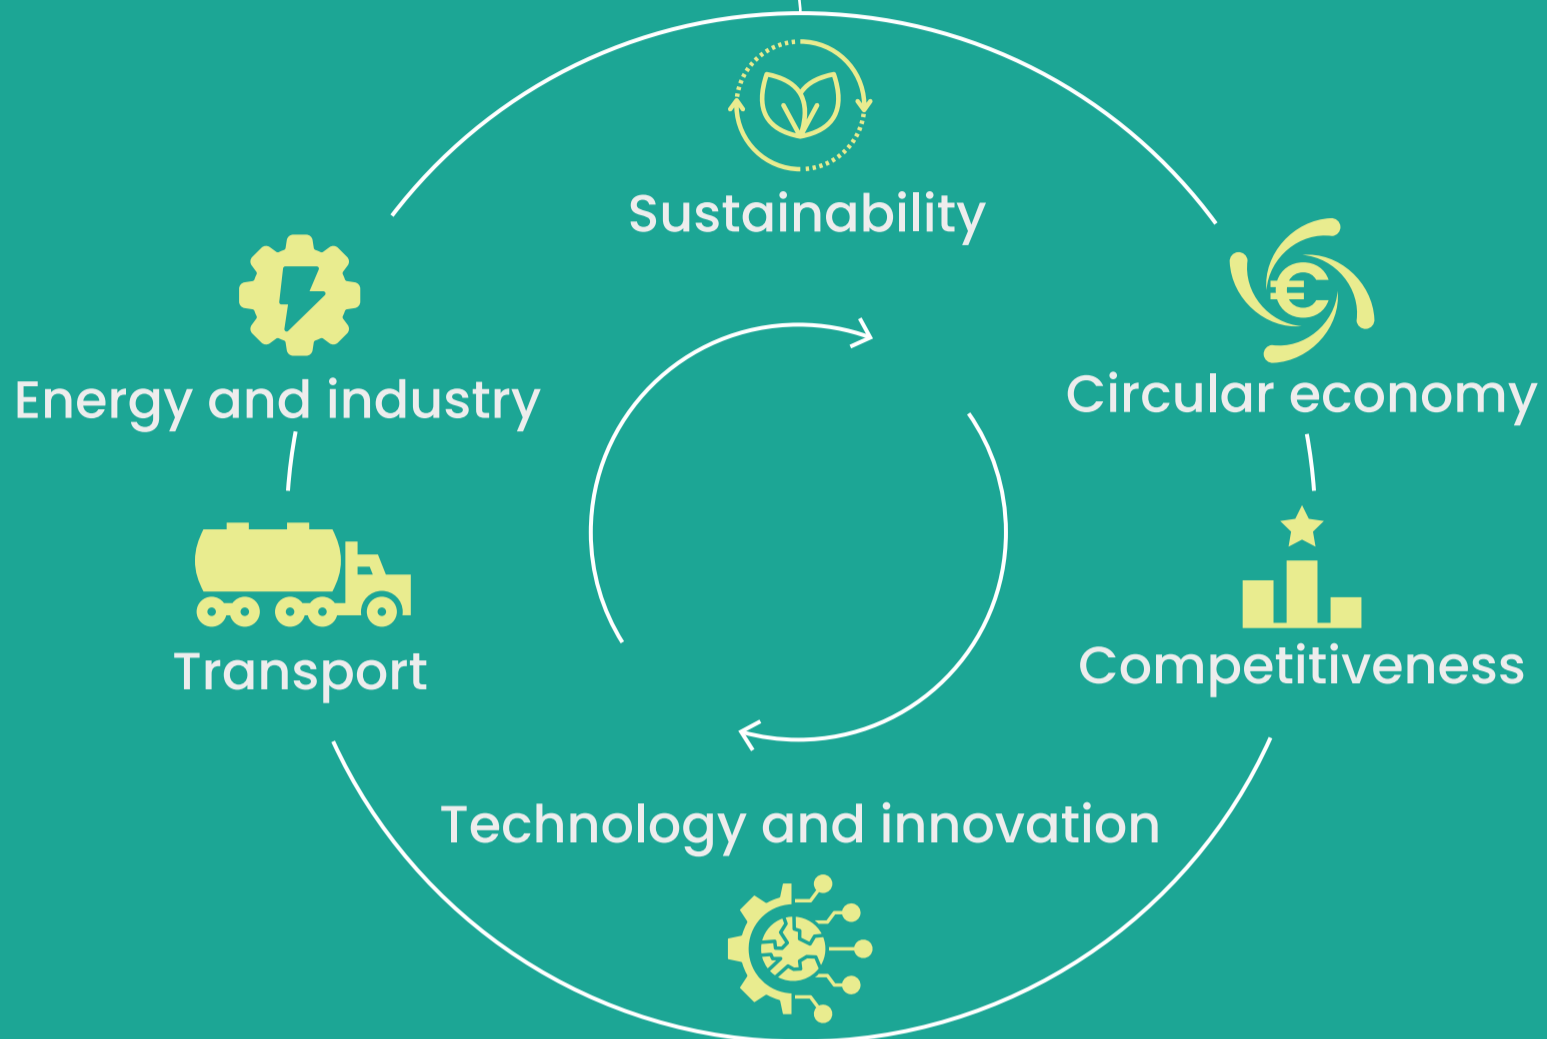

Connecting with an extensive network of nearly 8,000 stakeholders in Europe and beyond, via in-person events and on our members digital platform.

Promoting biogas awareness campaigns

Impactful communications to promote understanding of biogases and their positive effect on society, sustainability and economic growth.

6 working groups in action

EBA members in the spotlight

"EBA provides us with a platform for impactful discussions and solutions, and being part of this community grants us access to essential European forums, enabling our contribution to urgently accelerate the green transition."

Matti Vikkula, CEO Biokraft

"EBA's commitment to providing up-to-date and relevant information not only contributes to our impact within the industry, but also serves as a catalyst for realising our mission to shape a profitable, sustainable green energy future."

Rosa Puentes Fernandez, Green Gas Origination and Business Development at Renera Energy

EBA has played a pivotal role in tackling sector-specific concerns within a dynamic regulatory landscape. Moreover, EBA has been essential in enhancing the public perception of biomethane as a sustainable and effective way of combating global warming.

Cristina Avila, Founder and President, Verdalia Bioenergy

Helping the EU achieve climate- neutrality by 2050
